

How to Create iPhone Ringtones with iTunes on Mac

The iPhone ringtone is especially music audio, with the extension of “.m4r”. Custom iPhone ringtone can only be created from the purchased iTunes music, automatically transferred to the iPhone when it is synced with the computer via iTunes. This article will talk about how to create iPhone ringtones with iTunes in details.

1. Open iTunes and add music files

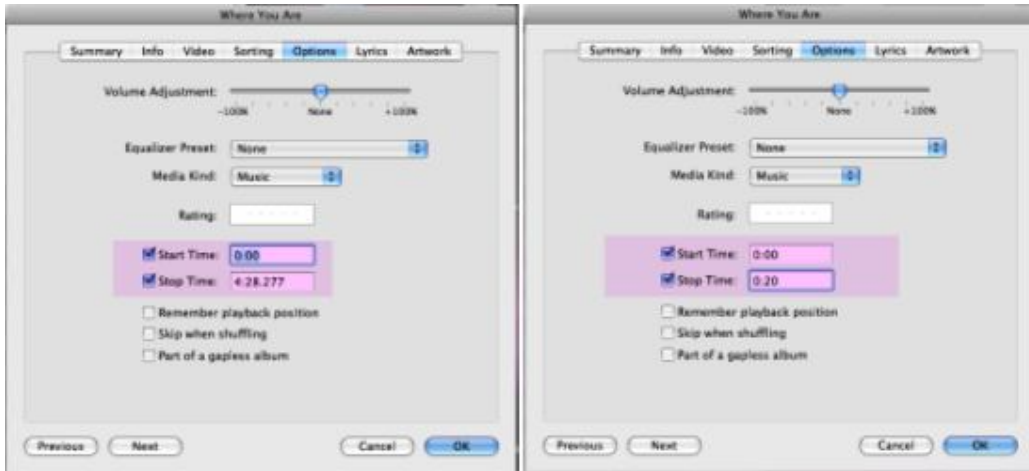

Click “Add to Library” button to import the songs ready to be converted to iTunes.

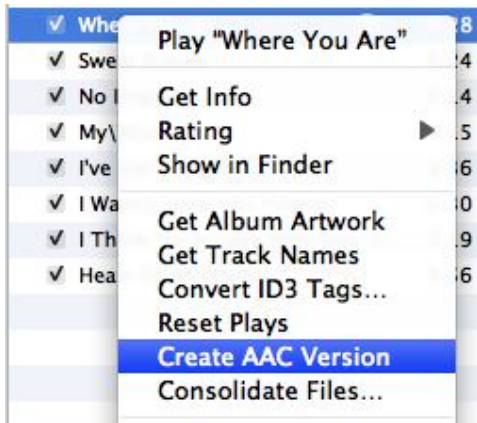

2. Reset the ringtone length

Choose the aim song. Right click and select the “Get Infor” item. In the pop-up dialogue, input the “Start Time” and “Stop Time” according to personal preference. The audio length should be within 30 seconds because there is a time limit for iPhone ringtone.

3. Start the creation

Choose the aim song again. Right click and select the “Create AAC Version” to start the creation. The new created file will appear in the list automatically.

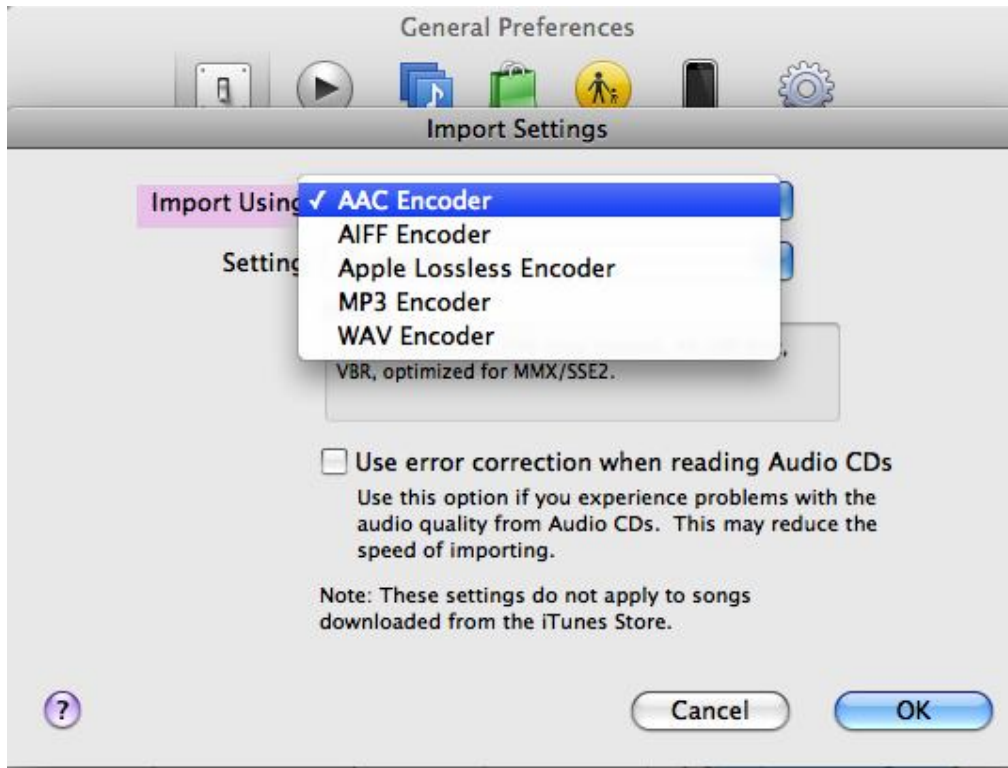

Note: If you cannot find the "Create AAC Version" item in the drop-down list. Just do as the following.

Click the top-left “iTunes-> Preferences...”

In the pop-up “General Preferences” dialogue, click the “Import Settings...”

Choose the “AAC Encoder” in the “Import Using” drop-down list. Then you can find the "Create AAC Version" item.

4. Rename the new created file

✓ Your Faith In Me	4:25	Jessica Simpson	Sweet Kisses	Pop
✓ Woman In Me	3:51	Jessica Simpson F...	Sweet Kisseaç	Pop
✓ Where You Are	0:20	Jessica Simpson F...	Sweet Kisses	Pop
✓ Where You Are	4:28	Jessica Simpson F...	Sweet Kisses	Pop
✓ Sweet Kisses	3:24	Jessica Simpson	Sweet Kisses	Pop
✓ No Importa	4:14	Noel Shajris & Joh...	Uno No Es Uno	Pop

Drag the new file to desktop. And rename it as “.m4r” file.

Delete the “.m4a” file in iTunes. Then Drag the “.m4r” file back to iTunes. It will appear in the “Ringtones” list as the following.

Finally, sync the ringtone to iPhone connected to your Mac previously.

Unfortunately, iTunes can only create ringtones from iTunes Plus music which is DRM-free music. If you would like to create ringtones from iTunes music which is under DRM copy protection, you have to remove the limitation with third-party programs, such as **TuneClone M4P to MP3 Converter**.
