

How to Import iTunes Music to Windows Movie Maker

Windows Movie Maker is a video creating and editing software application. New effects and transitions can be made and existing ones can be modified using XML code. Windows Movie Maker is also a basic audio track editing program. It can apply basic effects to audio tracks such as fade in or fade out. If you would like to import iTunes music into Windows Movie Maker, you need to remove the DRM copy protection of iTunes music.

This guide will show you how to remove DRM copy protection and convert iTunes music to mp3 importing into Windows Movie Maker with **TuneClone M4P to MP3 Audio Converter**. (<http://m4ptomp3.tuneclone.com/>)

Step1. Create a new playlist in iTunes and add the music resource to the newly created playlist.

Step2. Install and run the audio converter. Click the "Settings" icon. In the pop-up dialogue, you can specify output folder, output file name, output format, etc.

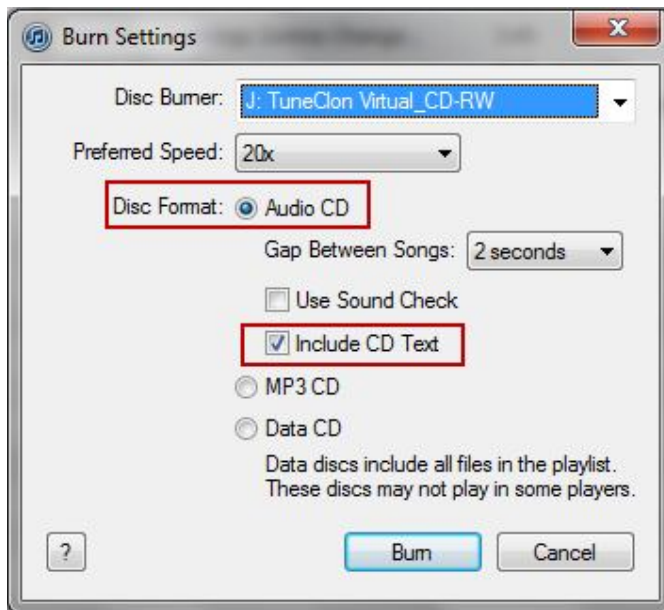

Tips: You can check whether TuneClone virtual CD drive is successfully installed and where it is installed at the bottom left corner of the interface.

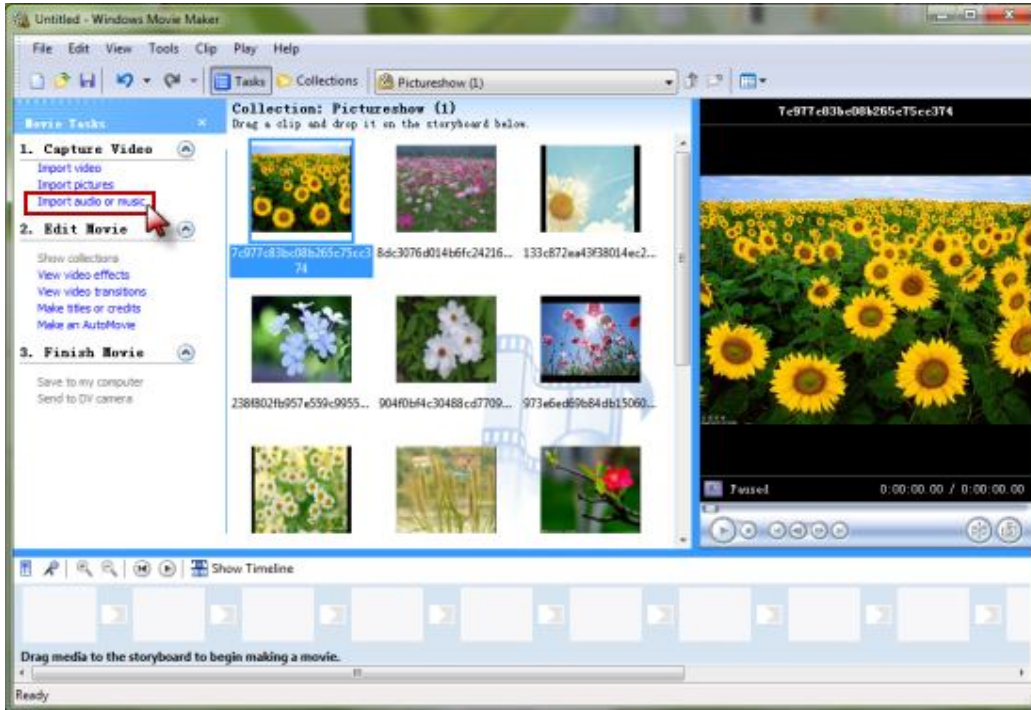

Step3. In iTunes, Right click the playlist you just created and choose "Burn Playlist to Disc".

Step4. In the pop-up "Burn Settings", choose "TuneClon Virtual_CD-RW" from the "Disc Burner" drop-down list, tick "Audio CD" and "Include CD Text" option. Then click "Burn" to start burning.

Step5. During the burning and encoding process, you can open the TuneClone manager screen to check the promotion. To locate the output folder, just click the "Folder" tab on the interface.

Step6. Run Windows Movie Maker. Click the "Import audio or music" to upload the output MP3 audios to Windows Movie Maker. Then you can do the video creating work.
